

## Our Health Survey of Attendees of APTHSC11 (Katmandu-2016)

Thanks to all those who responded to our small health survey following APTHSC11 in Kathmandu. With 248 responses, we have a strong sample of attendees.

As with previous conferences, about 60% of international attendees travelled around before or after the meeting.

Overall, 27 % reported health issues, mostly minor, with TD being the predictably highest individual affliction again, mostly acquired in Nepal. 36% of those folks with a health issue lost some time of a day or more, and 20 % required some kind of treatment. The majority of this was self-managed. (65% or attendees took a personal medical kit)

It is interesting that of those who answered the question on exposures, 30% said they ate poorly-cooked or raw food, and 31% said they drank local water. Also we should note that 31 % attendees travelled without medical cover travel insurance. Maybe we had lots of risk-takers amongst our group?

So, safe travels, see you in Bangkok in 2018!

\*All the figures are based on number of responses

### Q1: What is your home country?

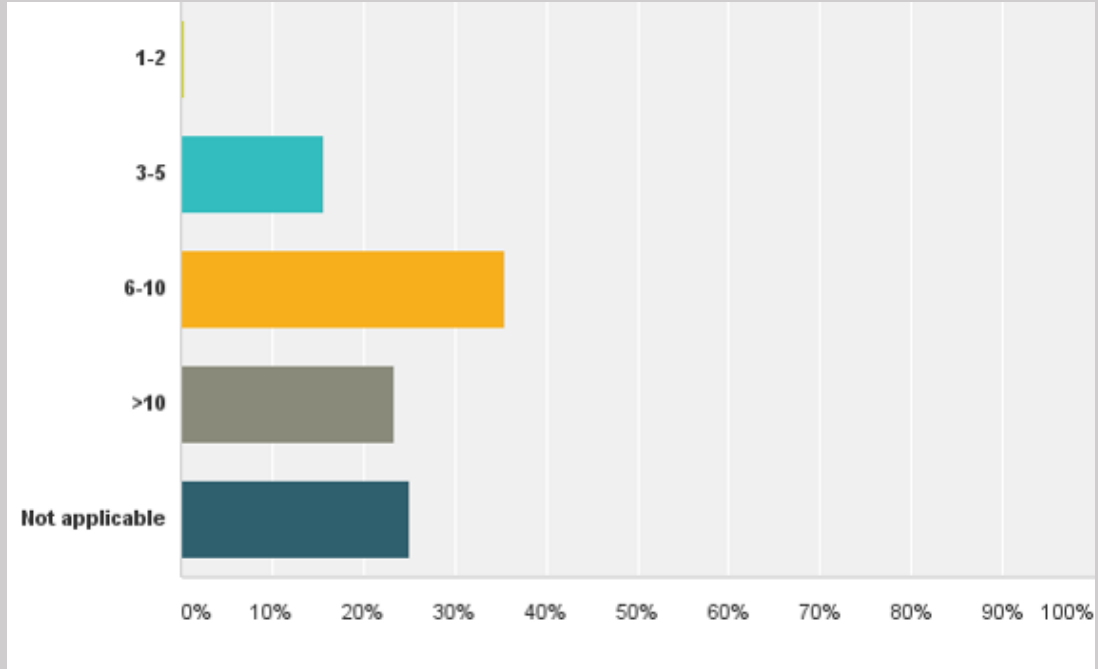

Answered: 248 Skipped: 0

Country	No.
Nepal	64
Australia	42
United States	17
